Scope of Work for Whatsapp based App Development

AMBI's is a fast growing, cloud kitchen delivery wholesome vegetarian food to people around Chennai. Their goal is to open at least 4 kitchens within the year and are currently operating two kitchens – one in Mylapore and the other in Semmanchery, OMR.

There are three primary brands, namely AMBIs, Dabbakaran By AMBIs and Bakshanam by AMBI's. Each of them will follow a separate purchase process by the users.

AMBI's currently working process features whatsapp and excel sheets primarily, supplemented with phone calls. This process, while ensuring that work is streamlined, is extremely manual and requires a very high degree of coordination. Also, given the last component of manual intervention, the process is also prone to breaking regularly – in various areas such as order taking and delivery.

To address this, AMBI's is looking at automating their operations using technology to reduce their dependency on manual work and most importantly, removing errors caused due to people dependency. Additionally, the workload of the staff is increased massively, as a result of updates via phones/calls by customers requesting for information.

Given below are some of the broad targets that AMBI's wants to address –

1. Create an app that can automate orders, payments, confirmations and delivery, by using their existing whatsapp based system
2. Reduce the number of incoming calls for updates from customers
3. Create a website frontend that can support ecommerce capabilities and be completely mobile-first in operation for purchasing of AMBI's products and services

Common User persona's

Customer persona

- Registered customers who purchase once in a while
- Subscribed customers who subscribe to a meal Plan (either north Indian or south indian)
- Un-registered users, who are potential customers

Employee persona

- Office Admin persona
- Accounts Persona
- Management Persona
- Delivery Persona

User Journey of all persona's – for Whatsapp based App

Overall User Journey – From unregistered users to subscribers

1. A user sees an ad in social media or as a whatsapp forward
 - a. User is then redirected to either the primary website (www.ambiskitchen.com)
 - b. Users can view generic company details, history of the company, location
 - c. Users can view menus (samples) and get an idea of various divisions of Ambi's
 - d. Users can view marketing landing pages of Ambis (Diwali specials, etc...)
2. User then visits the AMBI brand websites and can do two major tasks
 - a. Select a meal and then order (or become a subscriber) via whatsapp and pay using UPI (via <https://meals.ambiskitchen.com>)
OR
 - b. Select a bakshanam (or other product), order and pay online (via UPI or via payment gateway) via <https://shop.ambiskitchen.com>
3. For Meal plan or ala carte ordering, purchase & receipt of order
 - a. For 1st time customers
 - i. User is first sent to registration page (with registration and OTP based verification of whatsapp number)
 - ii. User can then view menu options (for lunch and dinner)
 - iii. User can select menu options, configure (customize) and then place order
 - iv. Once order is placed successfully, user can then pay for the order via UPI of AMBI (using payment app of their preference)
 - v. Order details can be updated to the whatsapp message (share order details)
 - vi. Once that is completed, users can view updates on order pickup
 - vii. On successful delivery of order, user can update by selecting "order received" in whatsapp and then the cycle is closed)
 - viii. There will be multiple special cases after this for refunds, credit notes, replacements, etc..
 - ix. After this cycle, the user will then become a customer of AMBIs and will be marked accordingly in the back-end
 - b. Existing customers
 - i. Customer will initiate a message by a keyword – say, lunch or dinner
 - ii. As soon it's initiated the lunch or dinner menu will be displayed
 - iii. Customer will select the meal and proceed to all the steps given in the user journey given earlier
 - iv. Customer can also select other extra meals and order for the same, based on the items pushed by AMBI's
 - v. Once all items have been ordered, a message for SOLD OUT / NOT ACCEPTING ORDERS will be displayed
 - vi. There will be multiple special cases after this for refunds, credit notes, replacements, etc..
4. For purchase of meal plans (subscriptions)

- a. For 1st time subscribers
 - i. Users will select the option for purchase subscription
 - ii. Users will be allowed to view the plan page
 - iii. Users will then be asked to scan a QR code for whatsapp process of becoming a subscriber
 - iv. Users will register their email / phone number
 - v. Users will complete plan purchase by selecting, yearly/quarterly/monthly plan and then selecting type of meal plan (North Indian or South Indian)
 - vi. Users will then select the user for whom the plan is purchased (parent, etc...) and provide details of delivery (whatsapp phone number and address /location details)
 - vii. Users will then have to authenticate the whatsapp phone number via OTP
 - viii. Users will then get confirmation of purchase (from AMBI's on the plan they have purchased, along with other key details)
 - b. Existing Subscribers
 - i. Subscriber will get an alert for lunch or dinner (pushed by AMBI)
 - ii. Based on their meal plan, the menu option will be display, along with other items that can be purchase extra
 - iii. Subscriber can customize their meal plan at no cost
 - iv. Subscriber can also purchase extra meals or ala carte options and customize the same too
 - v. All other steps will be the same as given in the user journey earlier
 - vi. There will be multiple special cases after this for refunds, credit notes, replacements, etc..
5. For Bakshanam orders, purchase & receipt of order
- a. For 1st time customers of Bakshanam
 - i. Users will be redirected to the Shopping Portal of Bakshanam
 - ii. Users will then view/browse the portals and add items to the shopping cart
 - iii. Users will be then follow the standard shopping flow, to register and then purchase the product
 - iv. Once product is purchased, users will be given the order details (with auto invoice) and redirected for more shopping
 - b. For returning customers of Bakshanam
 - i. Users will be redirected to the shopping portal of Bakshanam
 - ii. Users will follow the standard shopping process
 - iii. Users will have to mandatorily login, before the purchase process
 - iv. Everything else will be standard, based on earlier flow

Overall User Journey – for Office Admin

- 1. For office admin – creating of menus and publishing menus / extras for the week
 - a. Office admin can create and publish menu's for the week
 - b. Office admin can create and publish new bakshanam's including inventory available

- c. Office admin can create and publish extra meals (in addition to standard menu's for the week) including inventory available
 - d. Office admin can add costing for the same and number of meals available (quantity)
- 2. For office admin – to view orders
 - a. Office admin can view all orders being placed in real time
 - b. Office admin can chat with user, if there is something specific (credit note, address, order value mismatch, etc...)
 - c. Office admin can proceed with order processing
- 3. For office admin – to send orders to kitchen
 - a. Office admin can send orders to kitchen
 - b. Kitchen staff can print label with – customer name, delivery location and order details
 - c. Kitchen staff can paste labels on covers and then mark orders ready for pickup (after checking)
- 4. For office admin – to view after pickup
 - a. Office admin can check and view all orders are complete and ready for delivery
 - b. Office admin can view if order are incomplete

Overall User Journey – for Accounts

- 1. For accounts – Confirming order against cash received (balance books)
 - a. Accounts can view all previous days orders
 - b. Accounts can cross check with order values/ UPIs IDs to confirm receipt of orders
 - c. Accounts can apply delivery charges against invoice (based on delivery location)
 - d. Accounts can generate a bill or receipt or invoice for the exact order paid, along with details of payment (if needed)
- 2. For Accounts – To generate create credit note
 - a. Accounts can generate a credit note
 - b. Accounts can apply credit note, against order
 - c. Accounts can mark as refund and refund against order
 - d. Accounts can mark as replacement and ensure order replacement is done, after which invoice is generated
- 3. For Accounts – regarding clarifications
 - a. Accounts can initiate clarifications via whatsapp
 - b. Accounts can send bills via Whatsapp
 - c. Accounts can send credit notes via whatsapp

Overall User Journey – for Delivery

- 1. For Delivery person – Confirming order pickup
 - a. Delivery person gets list of orders to be pickup when kitchen staff marks order as ready
 - b. Delivery person received routing details, along with order details

- c. Delivery person confirms order pickup (by scanning label or other means – TBD)
- d. Delivery person delivers order and confirms order delivery (either via OTP or via other means – TBD)

Overall User Journey – for Management

1. For Management – Reports and statuses
 - a. Dashboards to view order status vs delivery for each meal service (lunch & dinner)
 - b. Detailed reports from dashboards to drill down into all order details (like razorpay)
 - c. Summary reports for end of day transactions such as total orders, total revenue generated and ARPU (Average revenue per user – by day, week, month and quarter)
 - d. Custom sorting ability for each detailed report view, including search by specific order IDs, customer name, location, etc...

Solution Deliverables

1. Primary website (for information & marketing purposes)
2. Microsites (for online shopping & meals purchase)
3. Integration with Whatsapp
4. Basic inventory system
5. Admin user back-end system for administration and real-time status updates of orders

Solution Deliverables with timelines

S.No	Solution deliverable	Phase	Timeline	Notes
1	Designs – for all front-end – sign off	Design	3 Weeks	Must includes customer sign off and will include UX flows
2	Ecommerce Flow – for online shopping including product cataglogging system, integration with authentication system and integration with payment system	Development	8 Weeks	Will vary, based on tech platform chosen and integration challenges
3	Meals ordering system – including integration with whatsapp, menu creation & publishing module, subscription purchase module, kitchen & delivery module, Accounts module	Development	10 Weeks	Can be done in parallel and released in phases. Must develop informational website first and get DLT / Meta registration first (3-4 weeks for the same)

	and integration with payment system			
4.	Testing & Go-live (staggered)	Testing	3 weeks	This is common, based on overall development plan
5	Data upload – recipe data, user(Customer) information ONLY	Data Upload	1~2 weeks	Will include only data that is relevant for users and functioning of app. No PAST order details will be updated

Solution Options with costing
