

PROFILE

Junior AWS DevOps Engineer with 1 year of experience at Hotfoot technology solution. Demonstrated expertise in DevOps and Agile methodologies, including continuous integration, continuous deployment, and automation, using tools such as Docker, Terraform, Ansible, Git, and GitHub. Passionate about building **reliable, high-performance data workflows** that enable analytics, machine learning, and business insights

EXPERIENCE

- **SQL** with a strong foundation in data modeling, SQL querying, and data visualization.
- Managed end-to-end deployment of **Java-based loan management applications** (Personal Loan, Home Loan modules) into production environments.
- Performed **manual production deployments** ensuring zero downtime and high availability.
- Implemented and monitored **Hazelcast** caching for performance optimization and secure authentication handling.
- Integrated **RabbitMQ** message queue for asynchronous communication between microservices.
- Configured and maintained **Nginx** as a reverse proxy and load balancer to support application scalability.
- Wrote and debugged **Shell scripts** to automate deployment tasks and system monitoring.
- Coordinated with developers, QA, and business teams to schedule releases and validate successful rollouts.
- Automated deployment processes using **CI/CD Jenkins pipelines**, integrating with **Docker** for containerized hosting of **Java, JavaScript, and Python applications**.
- Handled **post-deployment monitoring, log analysis, and issue resolution** in production systems.
- Experienced in containerization technologies, such as **Docker**, for creating reproducible and portable application environments.
- knowledge of **database** management (Installation, Upgrade, Backup, Monitoring, scaling)
- Hands-on experience with **HDFS (Hadoop Distributed File System)** for distributed storage operations and cluster setup in pseudo-distributed mode.
- Practical knowledge of **Apache Hive**, integrating with HDFS for structured data processing and retrieval using HiveQL.
- Strong foundation in **statistics, data analysis, and visualization** using Python libraries (Pandas, NumPy, Matplotlib)

TECHNICAL SKILLS

- **Cloud Platforms:** AWS (IAM, ELB, RDS, ECR, ECS, CI/CD, S3, RedShift, Lambda Functions etc...).
- **Databases:** MySQL
- **Programming & Scripting:** SQL, Python (with Machine Learning – Supervised & Unsupervised Learning), Shell Scripting.
- **Operating Systems:** Linux (RHEL, Ubuntu).
- **DevOps & Automation Tools:** Git, GitHub, Jenkins, Docker, Maven, Ansible, Terraform.
- **Big Data Technologies:** HDFS, Apache Hive.

EDUCATION

BCA

- Bachelor of Computer Application, Kamaraj College, Tuticorin. **GCPA: 8.5** 2020-2023

PROJECTS

1. Launched Hosted of Dynamic and static website using **EC2, ELB** with auto scaling and S3 bucket. Which can be accessible from anywhere using the domain name.
2. Code Deployment in EC2 server by using **Jenkins CI/CD Pipeline** with Maven from GitHub Repository.
3. Email Spam Detection System: Developed a machine learning model using Python (**Scikit-learn, Pandas, NumPy**) to classify emails as spam or not spam.
 - Implemented preprocessing, feature extraction (TF-IDF), and trained classification models (Naïve Bayes).
 - Containerized the application with **Docker** for easy deployment and scalability.
4. Big Data Query Processing with Hive
 - Integrated **Apache Hive with HDFS** for structured query processing on large datasets.
 - Performed hands-on queries for data retrieval, aggregation, and analysis using HiveQL.
 - Gained practical experience in combining distributed storage (**HDFS**) with query engine (**Hive**).

TRAINING

- I have completed courses in **Linux, Oracle SQL, AWS and DevOps** at Besant Technologies, Velachery.
- I have completed course in **Python** at postulate info tech, Tuticorin.
