Thoothukudi,Pin:628251

## EDUCATION

Anna University Regional  
Campus Madurai

BE Mechanical 2020- 2024

CGPA: 7.8

Pope Memorial Higher  
Secondary School

HSC 2019-2020

Percentage:65%

Pope Memorial Higher  
Secondary School

SSLC 2017-2018

Percentage:85%

## COURSEWORK

### GRADUATE

Obtained From MARCH 2024

TO MAY 2024 ZENJADE

AUTOMATION TECHNOLOGY

PRIVATE LIMITED CHENNAI

For Certification Post Graduate

Program in **Data Analytics**

**With Machine Learning**

## TECHNICAL SKILLS

- Python
- Power BI
- SQL
- MS Office

## TECH PROFILE LINKS

Github - [github.com/Ramesh07](https://github.com/Ramesh07)

Coding Profile - [rameshg24](https://www.rameshg24.com)

## CERTIFICATION

- Completed Python  
Programming in **Great  
Learning Academy**
- Employability Skill Training  
Program in Titanleap

## CAREER OBJECTIVE

To secure a suitable role as a trainee engineer in a reputable company where I can develop my skills and gain experience while contributing to the growth of the organization.

## PROJECTS

### SALES FORECASTING ANALYSIS USING PYTHON:-

- In this project Store Sales Prediction using **machine learning and python**, the task is to **predict the sales of different stores** based on the attributes available in the dataset.
- Predictive analytics discover the factors that **determine the number of sales that a retail store will have in the future** by using different machine learning techniques.
- We have implemented normal regression techniques and as well as boosting techniques in our approach and have found that the **boosting algorithms** have better results than the regular regression algorithms.

### DESIGN AND ANALYSIS OF CONNECTING ROD:-

- In this project, a connecting rod will be designed using SolidWorks and Ansys Software, considering factors such as material selection, weight, and strength.
- Engineered a revolutionary design for the connecting rod in an internal combustion engine, optimizing for durability and enhancing performance.
- The results obtained from ANSYS will help to refine the design, ensuring that the connecting rod is strong enough to withstand the loads it will experience during engine operation. By using these tools, engineers can optimize the design for maximum performance and reliability, reducing the risk of engine failure and improving overall efficiency.
